

BECAUSE LIFE IS COLOURFUL

SURFACES AND COLOURS

THE FUTURE STARTS TODAY

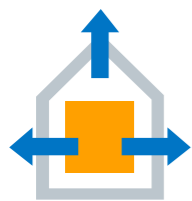

We act sustainability – for the environment and for generations

Sustainability is more than just a buzzword. It is about leaving a world worth living in for future generations. This includes not only ecological but social and economic aspects.

THAT IS WHY WE ARE TAKING A HOLISTIC APPROACH TO OUR SUSTAINABILITY GOAL:

Our products and manufacturing methods are designed to protect the oceans and the environment. Our recycling sets new standards for smart resource cycles. And we are committed to social responsibility via charitable projects and the Kömmerling Better World Stiftung gGmbH foundation. Sustainability is a genuine concern for us. Let's make the world a better place together.

MILESTONES FOR THE ENVIRONMENT. IMPETUSES FOR OUR COMMITMENT.

PROFILES WITH CHARACTER

When it comes to the character of buildings and the atmosphere of living spaces, windows and doors play an important role. Their style is characterised not only by size and shape, but also by the colour scheme and the appearance of the profile materials. And Kömmerling has a full range to choose from.

Discreet or colourful? Plain or metallic? Laminated with wood grain or aluminium shells with powder finishing? The diversity is almost limitless – the perfect conditions to express your creativity. You can combine proCoverTec surface technology with the sustainable Kömmerling ReFrame window profiles, for example. Or why not opt for Kömmerling AcrylColor, the colour that also protects? Anything is possible.

AN EYE-CATCHER WITH UNEXPECTED TALENTS

Kömmerling colour laminates

From discreet to extravagant, from classic to modern, from wood grain to plain colours right through to metallics: You are the one who gets to decide which design and which colour will look best on your PVC-U window profiles. Depending on your personal taste, matched to the style of the building and the character of the façade.

One thing is certain: The Kömmerling laminate programme has the perfect, lasting solution for you. Our colour laminates impress with their extreme durability. The same is true of the visual appeal: The laminates remain glossy even after years!

Varied

The selection of colours and colour laminates is extremely varied. The choice of surfaces ranges from smooth to grained and from glossy to matt or even extra matt. Room for individual design ideas.

Long-lived

Laminated window profiles are characterised by a high resistance to weather, chemicals and UV radiation. They keep their gloss and colour intensity even across years of use.

Flexible

The colour laminates also offer a great many design options. Nearly all of our profiles can be laminated – either only on the outside, only on the inside or even on both sides.

Easy to clean

The surface tension is reduced to such a great extent that the laminates are extremely dirt repellent and easy to clean. Even graffiti can be removed without any hassle.

Reliable planning

We offer an availability guarantee for our colours and colour laminate variants even years after the original purchase. Ideal for a standardised look, even after structural changes.

Sustainable

Initiatives such as VinylPlus or Rewindo, as part of which we are promoting sustainable, responsible action, are just two examples of our commitment to sustainability. The fact that our PVC-U profiles, including colour laminates, can be recycled conserves resources and reduces the impact on the environment.

Dimensionally stable

The laminates reflect the infrared radiation from the sun. This innovative technology protects both the PVC-U window profile and the laminate. No matter whether they are light or dark in colour, the windows remain dimensionally stable.

NOBLE LOOK WITH STRONG CORE

Kömmerling aluminium shells

Aluminium boasts a noble look – and PVC-U impresses with its structural properties. You can enjoy an exclusive range of designs, paired with optimum insulating values and top marks in environmental protection and longevity.

Efficient

The advantages of two materials combined in one window system: PVC-U and aluminium. On the outside, the look of an aluminium window combined with the outstanding thermal and sound insulation values of the PVC-U window.

Varied

The aluminium shell in the elegant look of an aluminium window comes in many different colours and structures – thanks to finishing techniques such as anodising or powder finishing.

Long-lived

The aluminium shell is extremely resistant and stable, which makes it very long-lived. It not only withstands many stresses, but also preserves its decorative look thanks to its colour and weather resistance.

Easy to clean

The high-quality paint on the aluminium shells means that soiling doesn't stand a chance of adhering. This results in an extremely easy-care, easy-to-clean and low-maintenance surface.

Flexible

Compatible aluminium shells are available for a great many PVC-U profiles. This offers a great deal of design flexibility.

BEAUTIFULLY PROTECTED

Kömmerling AcrylColor

Window design can be rather reminiscent of fashion: It protects and keeps you warm – all while looking great. Kömmerling AcrylColor also fulfils this dual function.

This is made possible by a specialist heat treatment process, the coloured Acryl is inseparably bonded to the plastic profile. This coextruded outer surface is made of polymethyl methacrylate (PMMA) and is extremely weather resistant; it also remains colour-fast and scratchproof over years.

In other words, Kömmerling AcrylColor is a colour that protects itself.

Colour-fast

The coextrusion of the acrylic paint and the white PVC-U profile creates unsurpassed colour fastness. The colour does not peel off, flake or bleach – even after years.

Resistant

No other synthetic material achieves the same level of scratch resistance as the acrylic surface. However, if scratches do occur, these can be easily buffed out so that they are no longer visible.

Weather resistant

The outer surface is extremely weather resistant. It withstands environmental effects just as much as extreme climate conditions and major temperature fluctuations.

Heat resistant

As the acrylic surface reflects the light thanks to its modern pigmentation, the profiles do not heat up as much and dark surfaces can be used even in warmer regions.

Easy to clean

The smooth satin acrylic surface is non-porous. This makes the windows dirt repellent, virtually maintenance-free and easy to clean.

100% recyclable

When old windows are turned into high-quality PVC-U for new windows, the material cycle comes full circle. At Kömmerling, that applies for all PVC-U windows – including Kömmerling AcrylColor windows.

Flexible

Kömmerling AcrylColor not only offers a selection of colours on selected profiles, but also a wide variety of shapes – from square to bevelled right through to curved.

A GREAT LOOK NOW. AND IN FUTURE.

The surface of proCoverTec

What makes proCoverTec a premium surface? The windows owe their noble appearance to a silk matt look. The unique combination of silk matt appearance, slightly structured, pleasant feel, optimal protection against UV light, weathering and soiling is decisive.

Because proCoverTec combines functionality with aesthetics. This is ensured by a specially developed liquid PVC-U that guarantees both lasting colour brilliance and dimensional stability.

Aesthetic

proCoverTec surfaces are characterised by their satin look and slightly textured feel. This is thanks to a liquid synthetic material that is applied to the PVC-U profiles using a special vacuum process.

Easy to clean

The proCoverTec surface is extremely homogeneous and tight. As a result, dirt particles cannot adhere to it. That makes the profiles much easier to clean – simply with a soft sponge, water and, where necessary, a little bit of washing-up liquid.

Flexible

The choice is yours: Our proCoverTec pallet ranges from selected plain colours to colours with an attractive shimmering metallic effect on defined profiles. And for particularly striking results, simply choose different colours for the inside and outside.

Dimensionally and colour-stable

Thanks to the excellent UV protection, the proCoverTec profiles heat up less and remain dimensionally stable. The particularly high density also makes the surface exceptionally robust. This also guarantees long-term brilliance.

THE PERFECT COMBINATION

proCoverTec and Kömmerring ReFrame

Kömmerring ReFrame window profiles made from 100 % recycled PVC-U, together with proCoverTec Full-Cover is the perfect combination.

Unique

We are finishing Kömmerring ReFrame with proCoverTec full-cover. The result is a combination that is unique in the windows sector: With the premium surface technology, the window profiles made from 100% recycled PVC-U become even more sustainable.

Sustainable

Kömmerring ReFrame are energy-efficient window profiles that are made from 100% recycled PVC-U. Thanks to the closed material cycle, natural resources are conserved.

GIVE YOUR WALLS A NEW LOOK

KömaStyle

Your bathroom tiles have seen better days and your rear shower wall could use a style update? The same goes for the splashbacks in your kitchen or the walls and ceilings in your living areas in general?

KömaStyle makes renovating and modernising easier than ever: The new wall cladding system from Kömmerling creates smooth, seamless and therefore hygienic surfaces in a noble look in next to no time.

The high-quality KömaStyle PVC-U sheets are also suitable for sanitary and spa facilities, retail and trade fair construction, restaurants and hotels, living areas and damp locations. They offer appealing solutions that save time – during installation and when it comes to caring for them.

SENSIBLE SOLUTIONS HAVE NEVER LOOKED BETTER

KömaStyle Deco colour laminates

It's true that choosing the most practical option makes sense when designing wet rooms. All the better when the most clever solution is compelling even at first glance – because it combines functionality with great visual appeal.

The best example is the KömaStyle Deco sheet. It comprises KömaCel integral skinfoam sheets that are coated with high-quality vinyl- and PVC-based furniture laminate – a unique solution. Discover the many different colour laminate variants, surfaces and application options.

Varied

Whether you are looking for wood grain, stone, plain coloured or special colour laminates – KömaStyle Deco offers a huge range of designs. You can even choose between different levels of gloss. That is what makes KömaStyle Deco so varied in its use.

Easy to clean

Thanks to their technical composition, the colour laminates are extremely robust and scratchproof. This not only ensures that they retain their surface properties, but also makes them very easy to clean and care for.

Long-lived

Their vinyl and PVC base makes the colour laminates exceptionally tough and durable. Since they are also moisture-resistant, this is also true for use in bathrooms or spa areas.

Sustainable

The combination of the KömaCel integral skinfoam sheet and the colour laminate is 100% recyclable. At the end of their service life, we return the sheets to the material cycle just like our window profiles.

UNLIMITED DESIGN OPTIONS

KömaStyle D digital printing

How about a pearl look? Or maybe wood grain or a stone texture? Or – and this option is hard to top – something very personal, for example a photo from your last dream holiday? The digitally printed laminates for the KömaStyle D sheets make all this possible.

Varied

Digital printing opens the way for a seemingly endless number of possible designs. The KömaStyle D is available with aluminium composite or integral skinfoam sheets. This makes them suitable for a wide range of applications.

Easy to clean

Another benefit of the printing process is the extremely scratchproof and wear-resistant surface. Of course, this also makes KömaStyle D very easy to clean and care for.

Long-lived

The printed colour layer on an aluminium composite or integral skinfoam sheet is very robust and moisture-resistant. The result is outstanding longevity – in wet rooms as well as in living areas.

Sustainable

KömaStyle D is also 100% recyclable and can be returned to the material cycle. With its sheet products, Kömmerling also makes an important contribution to achieving greater sustainability.
